

# VRH-3D VALVE

## Constant level valve for gestation, farrowing, weaning and fattening

The **VRH-3D** maintains a constant water level in any container where it is applied, working only with the pressure of the water that flows through it.

It is a more versatile and economic upgrade of the successful VR-H, which when launched in 2001 revolutionized the way that water is dispensed in pig farming by simplifying and increasing consumption and reducing waste.

### FEATURES

- 1/2 "water inlet with adjustable rear tap.
- Vacuum membrane suction sealing system.
- Water stops on reaching level of metal downpipe.
- Closure system at water inlet.
- Manual system for opening body.
- Adjustable water line connector.
- Lower minimum operational pressure.

### ADVANTAGES

- Simple and reliable operation at a wide range of pressures.
- Easy to set up even in existing systems.
- High water flow rate.
- Works with both large and small pans.

### TECHNICAL DETAILS

VRH-3D VALVES		
Number of animals	1-20	
Pressure, bar	min.	max.
	0,5	2,5
Flow, l/min.	min.	max.
	1,8	3,6 - 4,2
