

SIMPLYBAG

Manual system for packaging semen doses

Semenbag
Manual

Advantages

- Built in anodized aluminum. Light equipment, easy to transport
- Easy operation based on a simple movement sequence.
- Manual movement of the blisters, with capacity for six blisters.
- Filling by gravity or incorporating an auxiliary peristaltic pump. Clamp for stopping/ starting the liquid flow .
- Heat sealing by a manual clamp which seals two blisters at the same time.
- Tray for one roll of Manual Semenbag.
- Designed for better hygiene, with a smooth, accessible surface, easy to clean.
- Works with manual blisters, packed in 3 rolls of 500 units each.

Technical concept

Equipment for packaging semen doses manually. Its compact design make it suitable for any production center without special additional equipment.

Tubematic: Disposable tube for the filling circuit running from the jug to the blister.

TECHNICAL SPECIFICATIONS

Approx. empty weight	5,5 Kg
