

PheroBoar

Synthetic pheromones for the determination of heat in sows

“ A CORRECT HEAT
DETECTION
DECREASES COSTS
BY REDUCING
UNPRODUCTIVE
DAYS

Technical concept

PheroBoar is a set of synthetic pheromones with a sprayer to detect heat in sows.

Characteristics

- Tool to help in synchronising of heat in gilts.
- It improves fertility by decreasing unproductive days.
- It helps to detect heat in problematic periods (hot weather) and in areas where the male is not used (maternity, quarantine).
- Oestrus stimulation and sexual response in sows.
- It reduces reflux due to increased sow stimulation.
- It incorporates blue dye to mark treated animals.
- The sprayer allows exact dosage without wasting any product.
- Supplementary product to improve insemination and pregnancy rates.
- Easy and quick application.

Instructions for use

- Spray PheroBoar directly onto the animal's snout at 20-30 cm.
- Apply 1 or 2 taps per dose.

Packaging

100 ml bottle

Cases with 3 bottles
185 x 75 x 173 mm

9 cases per box (27 bottles)
185 x 325 x 235 mm

STAGES OF HEAT
