Recommended monitoring procedures :

Control of the work areas atmosphere after treatment:

After aeration/ventilation, the atmosphere of the rooms returns to normal.

In the case of confined rooms which cannot be sufficiently aired, control ammonia concentration.

8.2. Exposure controls

According to the requirements of Directive 98/24 /EC, the employer is required to conduct a risk assessment and implement appropriate risks management measures.

* For any situation where the absence of risk is not proven, he must consider the substitution or reduction of risk by improving in priority processes used and collective protection measures. The effectiveness of the solutions implemented will be checked by measurement in comparison to the statutory limit values for substances defined in Section 8.1.

* If the risk remains after these corrective actions, he must always check by routinely measuring compliance with regulatory OEL if they exist in section 8.1 and apply all the individual protective measures given in section 8.2.

* When formalized risk assessment indicates a low risk to workers' health, control of compliance with regulatory OEL may not be considered and all individual protection measures is not always mandatory.

8.2.1. Appropriate engineering controls :

Apply the necessary technical measures to comply with the professional exposure limit values.

In use, keep any combustible material.

At the end of the application period, mechanically ventilate the work areas for a minimum of 1 hour in order to replenish the ambient air to 90%

8.2.2. Individual protection measures, such as personal protective equipment :

Eye/face protection :

Wear protective goggles compliant with standard EN 166 if there is a risk of exposure.

Examples of preferred materials for insulating gloves:

Butyl rubber.

Nitrile rubber.

Skin protection :

Wear protective work clothes

Respiratory protection :

None under normal conditions of use.

If the handling of the product produces aerial particles, wear an approved mask fitted with a P3 particle filter and adhere to the manufacturer's instructions.

If necessary to enter room during treatment, wear a face mask with an ABEK (class 2) + P (class 3) type filter (standard EN 149).

Thermal hazards :

Risk of burns to hands if canister is not cool enough: wear thermal protection gloves. (standard EN 407)

Health measures :

Safety shower and eye wash fountain near to workplace.

After using, wash systematically all personal protective equipment.

Handle in accordance with good industrial hygiene practices and the safety instructions.

8.2.3. Environmental exposure controls :

Avoid any diffusion of the product in sewage treatment plants and watercourses.

Do not throw the rinsing water from the treated surfaces down the drain.
