## Product data sheet

<b>Product name:</b>	HooFoss
<b>Product type:</b>	Hoof care product. <i>Non-organic product for conventional and organic farming (According to the council regulation (EF) No. 834/2007).</i>
<b>Composition:</b>	Monoclinic crystals of aluminium and iron. Zinc sulphate
<b>Physical character:</b>	Light green liquid with medium high viscosity
<b>Chemical character:</b>	Weak acid, pH = 2-2,5, density: 1,29 g/ml
<b>Stability:</b>	1 year from production date
<b>Storage:</b>	Keep away from sunlight and avoid freezing temperatures
<b>Packaging:</b>	20 kg plastic cans, 250 kg drum and 1300 kg IBC pallet tanks
<b>Country of origin:</b>	Denmark
<b>Safety:</b>	H318 Causes serious eye damage. P280 Wear protective gloves/protective clothing/eye protection/face protection. P305+P351+P338 IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. P310 Immediately call a poison centre or doctor/physician. Se SDS

### Application:

#### Spray

- Apply 2-3 times per week directly on problem areas with a knapsack sprayer or similar sprayers. Do not dilute the product. Avoid washing the hoof area before and after treatment.
- It is recommended to apply HooFoss spray during milking in milking parlour or carousel. Can also be used for heifers.
- After a few weeks of treatment, the problem areas will appear black with a scab, which should not be removed. This indicated a good effect, and treatment should be continued.
- Non-organic product, which can be used for organic farming according to the council regulation (EF) No. 834/2007. Not to be discharged to the slurry.

## Hoof bath

- Use twice per week in a suitable hoof bath with low nonslip profiles in the bottom. We recommend the HooFoss bath (200 x 85 x 15 cm).
- Place the hoof bath on a fully levelled surface.
- 30-40 litre of concentrated HooFoss is poured into the hoof bath. Top up with 10-20 litre of pure water to a liquid depth of 4-5 cm.
- For larger herds top up with 10-20 litre of concentrated HooFoss for every 200 cows.

## Hoof mat

- Use twice per week in a suitable hoof mat with a waterproof holster.
- Place the hoof mat with holster on a fully levelled surface and add 25-30 litre of concentrated HooFoss. For larger herds, add extra HooFoss after every 200 cows.
- Manure, primarily from the hooves, may accumulate on the hoof mat. If needed, this can be scraped off during milking.
- Wash the mat surface with water after use (Do not use a high-pressure cleaner) and force liquid out by walking over the mat several times. Hang up to drain.

## In general

- Allow HooFoss to dry for a couple of minutes, before letting cows into deeper layers of manure/slurry/water puddles. This can best be achieved by keeping the exit aisle from the milking area clean.
- HooFoss is not affected by manure.
- After a couple of weeks of treatment, problem areas will appear black, which must not be removed. This is an indication of good effect, and treatment should be continued.
