

# Pro Pasta

**Pro Pasta is a specific paste formulation, flavoured and very attractive to rodents even in presence of other feeding possibilities. This bait is used in the control of rodents inside and around buildings. By wrapping baits in individual pads, efficacy of product is not altered under humid conditions. One pad contains around 10g of pasta mixture.**

## Recommendations of usage

Determine areas where rats and/or mice will most likely find and consume the bait. Place the baits in these areas. Generally, these areas are along walls, by gnawed openings, in or beside burrows, in corners and concealed places, between floors and walls, or in locations where rodents or their signs have been observed.

It is important to use small quantities of baits in a lot of different places than to use big quantities but in a few places.

When consumption stops, leave some bait to prevent re-infestation.

Usage of bait station ensures security and quality of product.

## Dosage

### Rats

60g of baits every 10m (5m in case of high infestation).

### Mice

10g of baits every 5m (3m in case of high infestation).

### FORMULATION TYPE

Pasta

### ACTIVE INGREDIENT

Brodifacoum 0.004%  
Brodifacoum 0.0025%

### CHEMICAL CLASS

4-hydroxycoumarin. Anticoagulant of 2nd generation

### MECHANISM OF ACTION

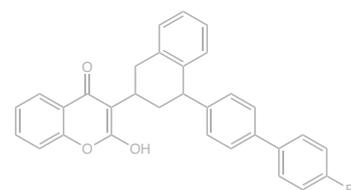

Vitamin K antagonist leading to anticoagulation of rodents

### TARGET

Rats and mice

### PACKAGING

Professional: As from 3 kg depending of countries.  
Amateur: Up to 150 g by dose of around 10 g.
