

CONNECTED MONITORING AND TREATMENT SOLUTION FOR RATS AND MICE IDEAL IN RESPONSE TO NON-PERMANENT BAITING

PUBLIC AREA MODULE

Our innovations aim to optimize the rodent treatment by ensuring distance monitoring to better control the risk of rodent infestation. RATDAR UNIVERSAL is a major innovation in the evolution of rodent control methods.

The need of a radical and modern solution for rodent problems is at the heart of our work. Our constant collaboration with our clients and field operators ensure that our solutions are adaptable to market needs.

Allows the treatment of large infestations in public areas (150 to 200 g of products is possible)

MICE MODULE

CONNECTED MONITORING AND TREATMENT SOLUTION FOR RATS AND MICE IDEAL IN RESPONSE TO NON-PERMANENT BAITING

The RATDAR Universal can be used for both detection activity of rodents through the use of placebos, or for their eradication by the use of rodenticides. It allows, thanks to its innovative technology, to remotely control the state of the bait stations and to be informed in real time of any critical activity based on a determined threshold alert. Equipped with blocks or paste, its simple toggle ensures that the baits have been consumed, and that the devices need to be recharged.

THE ADVANTAGES

- ▲ Optimizes interventions
- ▲ Increases productivity through effective time management of pest control operations
- ▲ Significantly enhances the efficiency of treatments
- ▲ Complies perfectly with the regulations (Non-Permanent Baiting)
- ▲ Continuous monitoring of baits
- ▲ Compatible with all types of baits (blocks and paste, toxic or non-toxic)
- ▲ Works as an independent alert or as an alert threshold (5gr, 15gr)
- ▲ Can be used with the majority of rodent bait-stations
- ▲ Mypestmonitor web interface
- ▲ Autonomous system, does not intervene with the customer's network

ADAPTABILITY

- ▲ Industrial Facilities
- ▲ Public Areas
- ▲ Hospitality Sectors
- ▲ Agriculture, livestock
- ▲ Healthcare

RATDAR INNOVATION

Using connected products means choosing a partner who will be able to support you and offer you the relevant support. RATDAR adapts to meet the different needs and strategies of its clients.

RATDAR OFFERS

- ▶ Daily, weekly or monthly device status reports
- ▶ Ability to give access to the platform to your customer or not
- ▶ Direct connection to your internal tracking software if you have one

All our customers benefit from permanent support permanent by our support:

- ▶ Technical training and on-site visits
- ▶ Technical support and expertise per infrastructure
- ▶ After-sales service

NOTE Our certifying training courses ensure that you can manage field service interventions and after-sales service in complete autonomy.

USING AND CONTROLLING OUR SOLUTION

Whether it is an industrial site, office, shopping mall, restaurant, etc., RATDAR UNIVERSAL is a major ally to optimize treatments. A device can be loaded by baits, toxic or non-toxic with 7/7 monitoring. Super effective since placebos are used in monitoring. Rodents are attracted thanks to the baits and the intervention is carried out as soon as the activity is detected.

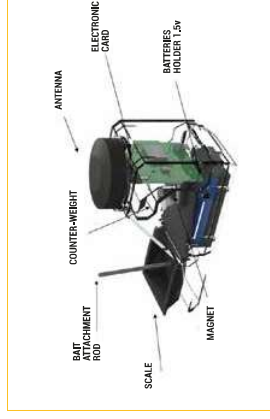

RESPONSIVE TREATMENT => PROACTIVE TREATMENT
TIME LOST => TIME MANAGED

Your fleet of RATDAR UNIVERSAL stations accessible via the web interface and contains all the information necessary to monitor your field interventions and historical activity. You can quickly know where to intervene and especially if there is a need to intervene! That's a main benefit of our solution: saving time to focus on critical problems and solving them as quickly as possible.

ON-SITE INSTALLATION SIMPLE AND USER-FRIENDLY

Each device is delivered ready to use. Just link it to a customer account via the web interface by entering its Device number. RATDAR offers you a video guide for first time installation

Identify 6 characters identical on the exterior and interior

NOTE Good to know: ask your consultant for a full demonstration

QUICK INSTALLATION GUIDE

The field applicator can set up his traps at the customer's premises by following this simple procedure:

- ▶ Pull on the power switch located under the scale
- ▶ Position the bait on its fixing rod and perform a few movements up and down in leaving 3 seconds in each position, it will then return to the "Armed" position which means that the bait is in place. Check via the web interface that the device is communicating well
- ▶ Position your device securely in the field (in a suitable bait station, or with its Mouse Module or its Public Road Module)
- ▶ Input the location of the device on the customer's plan or on free paper, specifying the device number so to list it on the interface and make it accessible via Mypestmonitor platform (this step can also be prepared beforehand if the installation locations have already been identified)
